

# EMC DOCUMENTUM D2 PREMIUM: ADVANCED CONTENT MANAGEMENT APPLICATION FOR DOCUMENTUM

## Enabling rapid creation and delivery of content-centric solutions

### ESSENTIALS

- Advanced content rules for information management
- Flexible document lifecycle management
- Composite document assembly
- Accelerate time to value for new content-centric solutions—no coding needed
- Reduce costs and saves time to address new and evolving business requirements

### DOCUMENTUM MADE EASY

The Post-PC era brings a new kind of user—a user who interacts with information from a variety of sources, across a multitude of devices, and considers unique applications as part of the experience. Users need flexible and intuitive content management tools that can address changing business needs without having to fully customize their business applications.

EMC® Documentum® D2 Premium is an easy-to-use application that provides an intuitive user experience for Documentum paired with a robust and easy way to create and deliver Enterprise Content Management solutions faster than ever before through configuration—not customization.

### REMOVING THE COMPLEXITY FROM ECM

Documentum D2 Premium takes the complexity out of content-centric solutions by providing a spreadsheet-like approach to configuring purpose-built content solutions without the need for time-consuming customizations. This unique approach enables the business analyst to respond more rapidly to changing business needs and accelerate time-to-value for ECM solutions.

Business analysts can quickly customize the application; setting the desired properties that control document sets, creation rules, dynamic security models, distribution lists, document lifecycles, inheritance, auto-naming, auto-linking, and more through an intuitive spreadsheet-like approach to configuration.

With D2 Premium, organizations can use the same application to address a wide range of content-centric solution needs—ranging from business-critical to non-controlled content—all through configuration.

With D2 Premium, it's all about removing the complexity from ECM. As a result, document workflow tasks can be managed and delegated, virtual documents can be created and managed with simple drag-and-drop actions, and search is made easy through intuitive forms.
